

A Study of PDF Conversion Quality

Authors: John Smith, Jane Doe

Abstract: This paper examines the quality of PDF to Markdown conversion. We analyze various edge cases and propose improvements.

1. Introduction

PDF documents are ubiquitous in academic and professional settings. Converting them to Markdown enables better text processing.

2. Methodology

We created a test suite of 30 documents covering:

- Basic text formatting
- Tables and lists
- Images and diagrams
- Mathematical equations

3. Results

Our converter achieved 95% accuracy on simple documents and 78% on complex layouts.

Document Type	Accuracy
Simple text	98%
Tables	85%
Multi-column	72%

4. Discussion

The results demonstrate that layout complexity significantly impacts conversion quality.

5. Conclusion

Future work should focus on improving multi-column layout detection.
